

# Alfa Romeo

IT HAS EARNED ITS PLACE AS ONE OF AUTOMOTIVE'S MOST REVERED NAMES FOR MORE THAN A CENTURY. THE ALFA ROMEO TRADITION WAS BORNFROMINNOVATIVETECHNOLOGY, RACE-INSPIRED PERFORMANCE AND SEDUCTIVE ITALIAN DESIGN. FUELED BY PASSION, DARING INVENTION AND PROVENTRACK RECORDS, ALFAROMEO CONTINUES ITS EVOLUTIONARY JOURNEY.

WHATTRULY SETS ALFAROMEO APARTIS A UNIQUE UNDERSTANDING OF HOW EMOTION DRIVES US. IT'S HOW OUR DESIGNERS AND ENGINEERS PRODUCE VEHICLES LIKE NOTHING YOU HAVE EVER SEEN, FELT OR HEARD. VEHICLES THAT PROVIDE A TRULY PERSONAL CONNECTION WITH THE ROAD. FOR THE PURE DRIVER IN YOU, BEHOLD THE ALFA ROMEO 4C COUPE AND 4C SPIDER.

**4C COUPE** With a captivating mix of progressive technology, race-inspired performance and seductive styling, the Alfa Romeo 4C Coupe thrills Alfa Romeo devotees, performance enthusiasts and car connoisseurs alike. The world's foremost racing chassis designers collaborated on its highly praised framework. Its carbon fiber monocoque chassis and other advanced lightweight technologies help put 4C performance into supercar territory — and reflect more than a century of Alfa Romeo innovation and racetrack wins. This is supreme performance that can be experienced first-hand instead of admired from afar.

# PASSION RUNS IN THE FAMILY

**4C SPIDER** The Alfa Romeo 4C Spider delivers the thrill of the 4C Coupe's sharp corners and quick turn-ins with open-air exhilaration. Beyond delivering outdoor splendor to its fullest, the open-air design of the 4C Spider turns glances into gazes with gleaming carbon fiber accents found inside and out. Carbon fiber also contributes to its overall performance: its rigid but ultralight carbon fiber monocoque chassis, windshield surround and halo are key reasons why its removable soft top adds only minimal weight.

# A POWERFUL BACKSTORY

The Alfa Romeo 4C with carbon fiber roof and spoiler. The spoiler is also available in body-color.

Beyond awe-inspiring mechanics and design, the distinctive choices offered by the 4C Coupe turn driving this Alfa Romeo into a personal affair. Absolutely everything expresses the racing spirit of Alfa Romeo — the finely crafted details are purposeful and carefully curated. Choose from six wheel designs, four caliper colors, available premium leather trim or microfiber seating, body-color or carbon fiber spoiler and mirror covers, and more.

Making a powerful statement of their own, the available 19" dark alloy fan-spoke wheels give you a preview of the thrill ride to come.

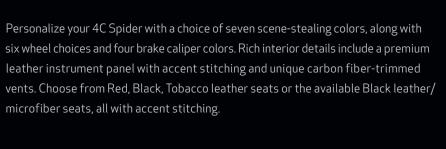

Distinctive interior fabrics and trims feature exterior color-matched contrasting stitching.

# aluminum 13

26.982

The monocoque chassis of the Alfa Romeo 4C is a single carbon fiber body similar to that of a supercar, while its crankcase and its front and rear frames combine the strength, rigidity and aluminum.

## REACTIVE ELEMENTS

Natural elements make up the most high-tech materials in automotive engineering — some of the same innovative materials and technology found in supercars and Formula One cars.

The success Alfa Romeo has enjoyed over the years can be attributed to our long dedication to making the most efficient use of both power and weight. This challenge underlies the design of every component of the car. The latest outcome is amazing: a curb weight of under 2,500 lb propelled by 237 hp, giving a weight-to-power ratio of 10.4:1. This is a figure that promises genuine supercar agility and performance. This impressively low weight has been achieved by using ultralight materials like carbon fiber, aluminum and composites, all chosen for maximum dynamic efficiency. Just over 13 feet in length, 6 feet in width and only 46.6 inches in height, the design choices of the 4C are just as bold as its dimensions. It truly is better driving through chemistry.

SUPERCAR

CARBON FIBER MONOCOGUE ALUMINUM SUBFRAMES MID-ENGINE LAYOUT

# LIGHTWEIGHT STRENGTH

Designed in collaboration with the world's foremost racing chassis designers, the Alfa Romeo 4C Coupe and 4C Spider are innovative at their very core. Supercar DNA runs throughout, including a carbon fiber monocoque chassis, mid-engine design and aluminum subframes.

It begins with the solid foundation of a carbon fiber monocoque chassis. Laid by hand, this carbon fiber is three times stronger and seven times lighter than conventional steel. Front and rear aluminum subframes combine strength with weight-saving technologies. Sheet Molded Compound (SMC) is used for the outer body and is 20% lighter and more stable than steel — and also resists corrosion. The end result of these advanced technologies is incredible strength and remarkable weight-efficiency — the overall curb weight is just under 2,500 lb for both 4C Coupe and 4C Spider.

Aluminum front sub-frame

**13** 

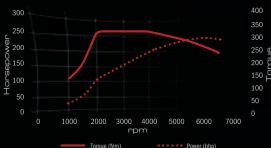

# MASTER OF THE POWER AND WEIGHT EQUATION

If there's one thing Alfa Romeo has learned from years of victory on the racetracks, it's that balance is key. The mid-engine layout, rear-wheel drive and monocoque chassis give each 4C model ideal weight distribution, with amazing handling and control.

The groundbreaking, centrally mounted aluminum 4C engine significantly reduces weight as it eliminates the need for a driveshaft and optimizes weight distribution by concentrating mass near the center of the vehicle. With Rear-Wheel Drive (RWD), the 4C makes full use of the dynamic advantages afforded by this configuration. RWD allows better grip under acceleration when engine power throws weight toward the rear of the car. RWD also lets you enter curves at higher speeds, delivering a far more intense and rewarding driving experience. All of this means the Alfa Romeo 4C will accelerate (0-60 mph in 4.1 seconds) as quickly as cars boasting higher horsepower — yet will corner sharper, brake harder, turn in quicker and respond more readily. It's the kind of gratifying response that makes each and every trip something to look forward to.

## POINT AND GO

OPTIMIZED AIRFLOW The advanced engine technology of the Alfa Romeo 4C maximizes torque at low engine speeds and delivers more power in response to driver input. The control unit determines the valve timing to encourage fresh airflow from the intake through to the exhaust during the overlap period. By improving the circulation in the combustion chamber, this direct flow increases combustion efficiency and turbine speed while reducing turbo lag.

TURBOCHARGER The engine is also equipped with a new-generation turbocharger, and a pulse converter exhaust manifold that uses pressure waves to boost torque at low engine speeds. The manifold and turbine are made from microcast steel and designed to operate at very high temperatures (over 1,000°F) — a prerequisite to low fuel consumption on medium/high-speed highway trips. The wastegate valve is another essential device for engine efficiency. This adjusts turbo pressure control logic to suit driving conditions, minimizing pumping losses.

AFTER-RUN PUMP The 4C uses an automatic cool-down system to protect its turbocharger. Switching off the engine would normally cause the immediate stoppage of oil circulation, leaving the oil in the turbocharger to stagnate at very high temperatures. The thermal stress suffered by the oil under these conditions causes a loss of lubricating capacity and also leads to the formation of residues that can damage the engine. To prevent this, Alfa Romeo has introduced an after-run pump. This electric pump is automatically controlled by the Electronic Control Unit (ECU) and keeps oil circulating through the turbocharger until it has cooled sufficiently.

ALFA TWIN CLUTCH TRANSMISSION (TCT) The 4C is equipped with an ALFA TCT 6-speed automatic transmission with a twin clutch and paddle shifters, a solution that combines the instant power of a sequential shift with all the convenience of an automatic. This system works like two gearboxes in parallel, each with its own clutch, minimizing discontinuity in power transmission. The ALFA TCT clutch has been specially modified for use on the Alfa Romeo 4C, and features control software that ensures the fastest possible gearshifts under all conditions — as quick as 130 milliseconds. Gearshifts are more aggressive in the dynamic and race modes, yet are completed in the smoothest way possible on bends to avoid reducing stability.

## **FLAWLESS TRANSITIONS**

Overall performance is superbly enhanced with numerous features designed to hone and improve each trip. The four-mode Alfa DNA Drive Mode Selector gives drivers the ability to create a customized vehicle experience according to driving conditions or desired vehicle responsiveness. Choose from its All-Weather, Natural, Dynamic or Race settings, which make changes in throttle response, shifting speeds and traction control for a driving experience tailored to any situation.

\*All disclaimers and disclosures can be found on page 25.

**RACE** This is the most extreme performance mode for 4C. By minimizing the interventions of electronic systems, it leaves the driver in complete command. Electronic Stability Control (ESC)<sup>1\*</sup> only intervenes during aggressive braking. Anti-Slip Regulation (ASR) is deactivated under acceleration and braking, while the Alfa Romeo Electronic Q2 differential control system remains active for fast exits from bends.

The 4C is also fitted with Launch Control for masterful, high-performance standing starts. Launch Control is activated by pressing the brake pedal while pushing the accelerator pedal all the way down and squeezing the paddle on the left of the steering wheel. As soon as you release the brake, the system automatically controls the transmission, traction and power to maximize acceleration.

DYNAMIC True to its name, this mode helps deliver great driving performance with near-instant accelerator response and reduced gearshift times of up to 25%. The ESC<sup>1</sup> system only intervenes when drift angles put the car at risk.

NATURAL Designed for everyday use, its gearshift parameters are configured for maximum comfort and smoothness. In Manual mode, Auto-Up and Auto-Down functions shift at just the right engine speed. The Alfa Romeo Electronic Q2 differential only cuts in during a significant loss of grip.

ALL-WEATHER This mode ensures maximum safety under adverse weather conditions with gentle accelerator response. The ASR system prevents skidding by modifying power to matchroad speed during loss of grip.

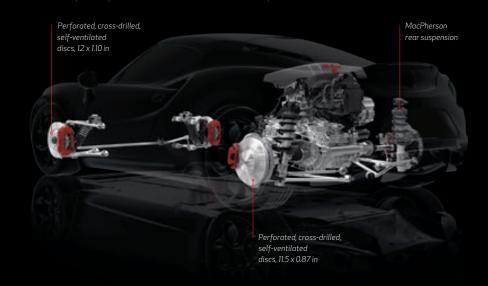

A combination of sport suspensions, large self-ventilated cross-drilled brake discs and different-diameter tires: the 4C boasts an advanced ride control system, giving every driver extra street smarts.

The suspension adopts race-derived technical solutions to optimize performance and deliver unrivaled driving pleasure. At the front, the Alfa Romeo 4C features a double-wishbone configuration that gives direct and unfiltered feedback from the road. At the rear, the advanced MacPherson suspension ensures superb road-holding and driving fun, even in the most extreme maneuvers. Both front- and rear-suspension systems are made from aluminum and high-strength steel. The braking system is designed for high-performance racetrack use. The perforated, self-ventilated front discs and Brembo® calipers offer supreme stopping power. And to ensure maximum grip and prevent skidding under all conditions, the 4C is fitted with different-diameter tires, 17"–18" or 18" –19," with the larger size on the rear for the best possible handling.

1. No system, no matter how sophisticated, can repeal the laws of physics or overcome careless driving actions. Performance is limited by available traction, which snow, ice and other conditions can affect. When the ESC warming lamp flashes, the driver needs to use less throttle and adapt speed and driving behavior to prevailing road conditions. Always drive carefully, consistent with conditions. Always wear your seat belt. 2 Certified to Pederal regulations that allow less froreful air bags. Always wear set but set and the standard air bags. Always look before proceeding, electronic drive aid is not a substitute for conscientious driving always be aware of your surroundings. 4. Requires a mobile phone equipped with the Bluetooth Hands-Free Profile.
