

# Air Intake Duct

- Features**
- The size of the opening is about **10 times bigger** than the stock.
  - Normally the FRP products have the fiber marks inside, but HKS Air Intake Duct has **a flat surface** inside.

- The stock connecting part to the air cleaner box is warped because it's made of flexible resin but HKS Air Intake Duct does not because it's **made of FRP which is very strong**.

- There are air holes on top of the duct to have higher position against flooded or submerged situation.

\* Need to take off the bumper for installation.
