Remote & Auto roll windows: Another solution besides Alientech & Autowindow

[«](#) [»](#) 10:31 PM 9-7-2006

[Reply](#)

So I was reading through the TDIClub forums the other day and noticed people were buying this KVV100 module that basically flashes your comfort control module to use the remote and auto roll window feature hidden away in the MKIV. I remember reading months ago that people though this was a scam, but after reading success stories on TDIClub.com, UK-MKIVS.net, and World Impex was selling them, I was convinced it would work.

So I ordered the \$45 piece that plugs into the OBDII port and it arrived today. Plugged her in and two minutes later it was done! Crazy 😊

The product was advertised as having the auto window roll up three seconds after the alarm is armed, but mine didn't turn out like that. Instead, I have to hold the lock button on my FOB to roll the windows up. Same goes for the windows to roll down, but that's normal.

So if you don't feel like taking apart your door and spending a tad less money, I recommend this product. I'm not spamming or advertising for this guy, I just think it deserves recognition.

Here is the guys website (needs some work)
<http://www.szkvw.com/english/INDEX.htm>

Here is the World Impex Link
<http://www.worldimpex.com/item...52429>

What about the sunroof? Does that close automatically too? If it does, I'm in for it.

The only reported issues are from the UK guys. Some claim their alarm isn't working after the update. Those guys have the 799B module. If your 20th/337/GLI is like mine, you should have the 799C module which is the recommended module for the update. On a side note, people with the Jetta/Passat wagons are reporting their trunks now pop open now instead of pulling the handle. I guess that isn't the case for the Golf/GTI cause mine doesn't. I think your safe to buy it personally.

It is supposed to, but i didn't try it yesterday because of rain. I'll let you know.

Update: Sunroof works too 😊

I don't know the address for the webpage is Shenzhen City China. I know and have seen documentaries of "business" practices in China where pretty much anything goes as long as the Communist Party is getting a cut. Yea there is some legitimate business there but on the whole the mentality is: Anything to make a buck. And their consumer standards and product quality are night and day compared to what a typical westerner's idea is. So that being said: Buyer Beware. I would need to see a HUGE list of Guinea pigs (all with positive experiences) before I'd contemplate it.

Id like to see if the soft coding for the convenience model was changed too just to compare before and after...
Thats awesome tho. I totally would trust impex, guess i gotta keep checking ...

Soft coding remains the same.

It will only close your sunroof, just as if you were closing with the Key in the door.

Buyer beware... the thing works. I'm not sure if you've seen the method using a DOS program called VDS or VDC and messing with EPROMs. It allows you to change the values to enable the window features. The KVV100 does the same thing but without the need of DOS, VDS, and a KKL Serial OBDII cable. It doesn't actually flash your CCM, it just changes a few values. The guy who makes these is more active in other VW forums. Not so much Vortex because I don't think people were taking him serious, BUT he is help full and motivated to keep people satisfied.

For whoever wants to do the manual coding for the windows here are some links on how to and more info on the KVV100.

just order one from world impex for my golf
it is so crazy!!
just one press "lock " to close all windows and sunroof,
"lock" + "lock" all windows and sunroof keep its original state.
hold on "unlock" windows vent, but sunroof not open.
it is wonderful ! but how should I do with the used kww100?

How does the company prevent ppl from "sharing"?

What happens if the update is not successful? Can you revert back to your original factory settings?

Crzypdilly,

Tell the creator to visit this thread. We're very interested in his/her product and have some questions.

Thanks,
Alex

Good question for ppl with APR, Revo, or GIAC DPP is how this flash will impact KVV100? And vice versa?

The modification/changes in value are to your Convenience Module. and not your ECU. No impact at all to GIAC, APR, etc. The Flash Module is for one time use ONLY...after the Convenience Module is flashed, it is disabled.

Hey just letting you know the guy read the thread, but said he can't post on Vortex. Maybe he is blocked or something... but he passed the following e-mail to me...

From: szkvw100@yahoo.com
thx for your warmheart! these are answer i post but i can not post in vvwvortex. can you help me to post? thx so much!!

- 1.How does the company prevent ppl from "sharing"?
What happens if the update is not successful? Can you revert back to your original factory settings?
we make it one kvw100 can only update one car. so can not use for 2 or moe cars
if not success then no harm to your car and kvw100.(but if you try for more than 6 times kvw100 will damage itself)
2. is it plug in or do you need a vag-com thing?
no it do not need a extra tool such as vag-com.
after update you can through it away do not need plug it for all time.
3. I just wanna know if it can be shared and how many times, etc etc.
Someone try it on a buddy's car!
we can design it for anytime SUCH AS 10 TIME but you have to pay the 10* SINGLE PRICE OR ANYTIME*SINGLE PRICE
- 4.how/ would this work if you had a turbo timer?
It has NO relationship with your turbo timer. so it is not a matter
- 5.Good question for ppl with APR, Revo, or GIAC DPP is how this flash will impact Kvw100? And vice versa?
kvw100 only flash some data in CCM(COMFORT MODULE 46 MODULE in vag-com), so it will not have any relationship with the revo apr and giac dpp. And vice versa.
6. Does APR utilize CM for switching programs via stalk?
can you express in simple english? i can not understand the meaning. (in fact i do not know whatis APR and CM) I am sorry for that.
- 7.Anybody happen to know what the price is on a convenience module in the even that something goes horribly wrong ?
is about 200 usd. but it will NEVER make your ccm damaged! even failed.

I have been communicating alot w/ this guy. I currently do ALOT of business in China. I will be visiting w/ hime while I am there in December. I am thinking about being a U.S. dealer for him. He does alot more that just window controllers.

You must have your ECU scanned w/ VAG-COM and verify that the first 3 characters of your Module 46 are **1CO**.

I will be paying close attention to this tread to see what the level of intrest is. Maybe I will organize a group buy.

The new version will work with both 1CO and IJOs. So technically, it will work for all models from 99.5 and up. We were able to confirm this with him just this past weekend...Saturday to be exact. Excellent Upgrade!
