IPS is NOT responsible for any damage, consequential or otherwise for equipment failure after installation

This Kit Moves the Gas Pedal 3/4" towards the driver to aid with heel and toe position with brake pedal.

1. Using a 10mm socket or wrench remove the 6mm bolt that holds the Gas Pedal on to the throttle arm assembly (Photo #1). Note there is a 6mm Lock Nut that is captured on the backside of the pedal so you do not need to hold the nut with a wrench when removing the bolt.

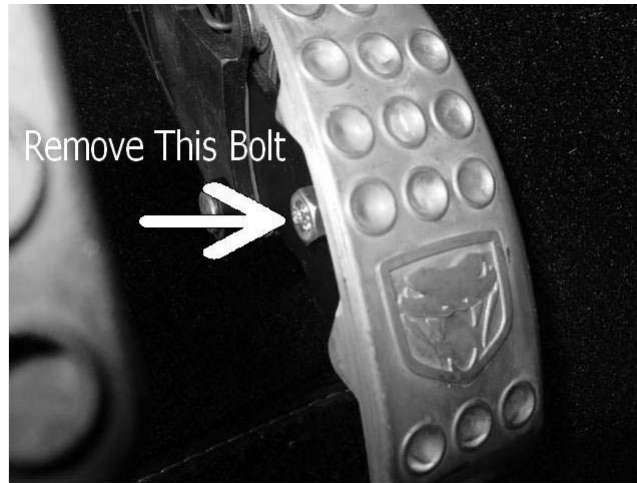

Photo # 1

2. Using the 6mm bolt and nut just removed in step 1, bolt the SRT Extension Bracket to the Gas Pedal as shown in Photo's 2 & 3. Make sure the lock nut is recessed in the pocket of the Gas Pedal as shown in Photo # 3.

Photo # 3

3. Now slip the Pedal and Bracket assembly onto the steel throttle arm so that the arm is recessed into the pocket shown in Photo # 2. Using the new 6mm bolt supplied with the kit put the bolt through the steel arm and through the new Extension bracket. Place supplied washer and lock nut onto the bolt. Make sure the new bracket is pushed toward the steel arm as far as it can go. Now tighten the bolt using a 10mm socket or wrench making sure to hold the nut on the backside with a wrench to keep it from turning while tightening the bolt. The completed assembly should look like Photo # 4.
